Electrostatic Oscillation Therapy

Electrostatic Oscillation Therapy is an innovative non-invasive method that achieves many therapeutic effects, including accelerating wound healing and the regeneration of soft tissues.

How Does It Work?

An electrostatic field is built up between the applicator/therapist's hands and the tissue of the patient. With the friction caused by the movement of the applicator or therapists' hands, the electrostatic induction happens, and then the soft tissues, which are attracted to the applicator or glove, react to the movement.

Indications

Muscle Relaxation	The stimulation is felt like an oscillation inside the tissue, which relaxes the underlying muscles.
Improvement of Circulation	The electrostatic oscillation effect created is beneficial to opening pathways and increasing the flow of blood and lymph throughout the body.
Improvement of Lymphatic Drainage	It helps open the lymphatic pathways, assisting lymphatic drainage.
Temporary Relief of Minor Aches and Pains	The pressure around the nerves can be reduced with the activation of the lymphatic system and the increase of blood flow by PowerOsci, so that the pain can be relieved temporarily.
Edema Reduction	Acceleration of the circulation and lymphatic drainage can apparently reduce limb edema.
Promotion of Wound Healing	Through the edema-reducing and anti-inflammatory effect, local metabolic elimination and alimentation are improved in all tissue layers, whereby tissue regeneration and wound closure are encouraged on many levels.
Anti-inflammatory Effect	It can inhibit inflammation by restricting pro-inflammatory cell activity and reducing the inflammatory mediator release.

Treat with Vinyl Gloves

Electrostatic oscillation therapy can be administered by a therapist via vinyl gloves to the patient. Place electrode pads on the therapist and connect the electrode pads to the device. Then the therapist wears vinyl gloves to apply massage movement.

Treat with An Applicator

The therapist can also use an applicator to deliver the treatment. Connect an applicator to the device and apply massage movement to the patient with the applicator. In this way of treatment, it doesn't need to place electrode pads on the therapist's arm.

A Quick & Intuitive Solution

Workflow enhancements that save time
– easy to learn, ready to love

Prepare the Treated Area

Wipe the treated area, making sure dry and clean.

Set Program

Choose pre-programmed protocols or manually customize one. And adjust frequency and time duration according to the desired treatment.
